Ashutosh Karaiya

Mumbai — Bangalore

+91-9617068138 karaiyaashutosh@gmail.com linkedin.com/in/ashutosh-karaiya github.com/karaiyaashu

Education

Birla Institute of Technology and Science, Pilani

August 2017 – June 2021 *Electrical and Electronics Engineering*

Technical Skills

Languages: Node.js, Java, Golang, Python, C++
Databases & Caching: PostgreSQL, MySQL, AWS DynamoDB, MongoDB, Redis, Redshift
Technologies & Frameworks: Spring Boot, Docker, Kubernetes, AWS Lambda, Kafka, RabbitMQ, Flask
Architecture & Testing: Microservices, Highly Scalable Backend Design, Unit Testing (GoMock), CI/CD
DevOps & Observability: AWS, GitHub Actions, Prometheus, Grafana, SonarQube, HashiCorp Vault

Experience

AngelOne **May 2024 – Present**

Software Engineer-2 (SDE-2) *Mumbai, India*

- **Spearheaded the zero-to-one development and architecture** of a net-new insurance product line, taking full ownership from ideation to scaling for **50+ Lakh DAU**.
- **Designed and developed highly scalable backend APIs** using **Golang** and **PostgreSQL**, driving a **5% conversion rate** via intelligent notifications and tele-sales nudges.
- **Participated heavily in the system design process**, architecting a multi-aggregator network with 5+ premier partners to ensure seamless frontend and backend integration during user onboarding.
- **Engineered a modular rules engine** from scratch to dynamically process compliance models, writing clean, maintainable code adhering to modern software architecture principles.
- **Built the backend for an internal Admin Dashboard**, empowering operational teams to live-configure and monitor campaigns.
- **Conducted thorough unit testing and debugging** by implementing a robust mock testing suite via **GoMock**, embedding SonarQube quality gates into CI/CD pipelines to ensure code reliability.
- **Proactively enhanced backend infrastructure** and observability using **Prometheus** and **Grafana**, restructuring structured logs with trace IDs to cut debugging latency in half.

Clickpost (E-commerce Logistics Intelligence Platform) **Jan 2023 – May 2024**

Software Engineer *Mumbai, India*

- **Architected a high-throughput data pipeline** utilizing Apache Spark to manage the daily ingestion of **100GB+ of data**, exhibiting deep knowledge of backend architecture.
- **Developed a proprietary micro-framework** that resulted in a **60% reduction in codebase size**, continuously refactoring the system to halve the time to market for new reports.
- **Designed and implemented an ETL system** to retrieve data from fragmented sources, slashing report generation time from **54 minutes to under 10 minutes** and cutting infrastructure costs by **50%**.
- **Optimized analytical queries on Amazon Redshift** by denormalizing data and tuning sort/distribution keys.

Ula (Indonesia-based Wholesale Marketplace) **June 2021 – Dec 2022**

Software Developer *Bangalore, India*

- **Created a scalable eKYC system** integrated with a third-party SaaS service via AWS Lambda, successfully verifying over **5,000 user identities** for fraud prevention.
- **Engineered engagement-driven gamification features** alongside a self-serve UI, collaborating effectively with frontend/UI teams to achieve a **34.8% increase in organic orders** within 3 months.
- **Orchestrated the migration** from a single Redis shard to a clustered Redis architecture, proactively improving backend infrastructure reliability, availability, and fault tolerance.
- **Built a high-volume WhatsApp broadcast system** capable of dispatching promotional media messages to millions of customers concurrently.
- **Established a link-sharing referral ecosystem** using **Golang** and Firebase, driving a **12% increase** in new user acquisition.

Genpact **Jan 2021 – Jun 2021**

Software Engineer Intern *Bangalore, India*

- **Developed a microservice architecture** using **Java** and Spring Cloud, establishing secure authentication via Okta OAuth2 and configuring HashiCorp Vault for secure secret management.

- **Wrote and maintained unit tests for Java code**, actively identifying bottlenecks and conducting thorough debugging to ensure robust code quality.
- **Optimized infrastructure expenditures** by implementing distributed scaling and integrating disparate tech-stack services under a unified, cohesive architecture.
- **Leveraged a robust cloud-native stack** including Spring Boot, MySQL, MongoDB, Docker, Kubernetes, and AWS to build and deploy highly available components.
